Powering Enterprise Transformations®

Power365® Integration combines Migration with a unified GAL for Day One cross-organization collaboration and increased productivity.

## POWER365® INTEGRATION

### Day One Collaboration and Coexistence Across Tenants

Power365® Integration introduces day-one collaboration capabilities between multiple Office 365 tenants by removing communication blockers that often create challenges for end-users. You gain a unified workforce with a solution that automates the coordination between different Office 365 tenants with a unified address list and global access to calendar availability between organizations. Automate direct changes to on-premises Active Directory users and mail-enabled groups that have been synchronized to Office 365. And Integration includes Power365® Mail Migration and Power365® Public Folders, for an efficient, comprehensive content migration—including automatically-matched permissions for efficiency and flexibility.

#### Migrate

Move between Office 365 tenants

- High-velocity, unlimited and uncapped migration of mail and archives between tenants or from on-premises or hosted environments

- Migrate Groups, Teams and Public Folders

- Optionally migrate OneDrive, SharePoint, and OneNote

#### Integrate

Synchronization and transparency

- Unified GAL across business units or organizations

- Access to calendars and free/busy lookup for transparency and ease of scheduling

- Synchronization between source and target mailboxes

#### Collaborate

Coexistence across tenants

- Streamline collaboration between tenants

- Maintain coexistence across business units or over multiple geographies

- Automate creation of mail-enabled users and groups
